

CORD-LESS Teth-Air

2013 Polaris Pro RMK Teth-Air Install

The Pro RMK is packed tight under the hood and finding a good place to install the Cord-less Teth-Air provided us with a bit of challenge but we were more than satisfied with the results. The side panels and upper cowling (hood) must be removed to install the Teth-Air. If you are not electrically or mechanically inclined, it is recommended that you employ someone who is qualified.
